

Neutrosophic Analysis of the Experimental Data

Dr. Pranesh Kumar¹

Experimental design and analysis is a systematic, rigorous approach to problem solving that applies principles and techniques at the data collection stage so as to ensure the generation of valid, defensible, and supportable conclusions. Often used completely randomized block design and Latin square design use blocking factors and experimental factor. In this talk, we will consider the neutrosophic randomized block design and neutrosophic Latin square design experimental data and neutrosophic analysis.
